This publication is fantastic. We have read through and i am certain that i will planning to read yet again yet again down the road. You wont feel monotony at at any time of your respective time (that's what catalogs are for concerning when you request me).

Springer. Paperback. Book Condition: New. Paperback. 351 pages. Dimensions: 9.0in. x 6.0in. x 0.8in. We are pleased to present this second volume of a series that has already received much interest. The application of magnetic resonance methods to the study of actual biological systems as contrasted to cell-free samples, although not entirely novel, as demonstrated by Civan and Shporer in Volume I, has taken on new dimensions with the use of phosphorus-31 and carbon-13 NMR in studying cells, tissues, and organelles. The applications of ^{31}P NMR to such systems is reviewed in this volume, while carbon-13 will be covered in a later one. The use of nitroxide spin labels has grown to the point where it now may be considered a common biological technique. The synthesis and applications of a new class of nitroxides is described in this volume. ESR spectroscopy of paramagnetic ions is a powerful approach to studying molecular and structural details, as the chapter by Boas, Pilbrow, and Smith on the ESR of copper in Volume 1 has shown. In this volume the ESR of molybdenum and iron is treated in a comparable fashion. In the first volume some aspects of ^1H NMR spectroscopy of certain classes of In this volume the high-resolu biological macromolecules were discussed. tion multinuclear NMR spectra of peptides, including the physiologically significant peptide hormones, are reviewed. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
